Raise your Game with High Profit Embellishments

DDC-810 Raised Spot UV Coater

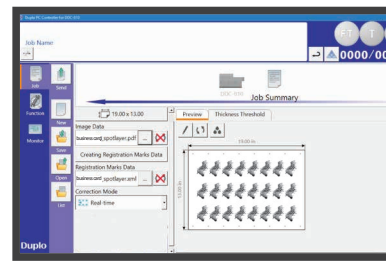

Produce premium packaging, business cards, and marketing campaigns with the Duplo DDC-810 Raised Spot UV Coater. Highly viable and compact in size, the DDC-810 utilizes 600x600 inkjet technology, UV lamp curing and camera image registration to deliver production output with texture and depth that your customers can touch and feel.

A value-added application with spot coating, texturing and tactile effects sells itself. Adding embellishments to your customer's print marketing helps tell their story, enhances their visual identity, and lets them stand out from the competition.

PRINT EMBELLISHMENT MADE EASY

The DDC-810 provides a user-friendly, design-driven solution that allows you to bring print embellishment services in-house. Utilizing the PC Controller software and hot folder technology on a PC station, you can produce value-added jobs quickly and efficiently.

Simply drop the grayscale spot layer file in PDF or TIFF format into a hot folder. The file is automatically ripped and stored in the queue. Select the job, choose the varnish thickness, and hit the Start button. Use the job cost calculator to help you quote jobs by estimating the polymer cost for each sheet.

HIGH PRECISION ENHANCEMENTS

Add spot coating, texturized, and tactile enhancements with incredible precision without the use of dies or screens. Simply apply our unique registration marks to both CMYK and spot layer files during prepress. As each sheet is fed, the CCD camera registration system will read the registration marks and automatically align the spot layer with the printed sheet. It will also compensate for any shrinkage, stretch, and skew to produce the most accurate sheet-to-sheet registration in the market.

The DDC-810 utilizes Duplo's signature air suction belt feed system and a high capacity feed tray to keep production running without interruptions. Embellished sheets are instantly cured by the UV lamp for immediate handling and finishing.

PROFITABILITY IN A COMPACT SOLUTION

The DDC-810's footprint does not take a lot of space, allowing you to create high-margin jobs from your own print shop. Using our digital technology and the output from your digital presses, you can drive profit through short-run and customized applications and see a rapid return on investment. A raised logo on a business card or product packaging delivers the message with style. The textures on the leather seats of a luxury car piece or the ice cold drops on a beer ad generate more engagement and higher response rates.

Print embellishment amplifies perceptions of value and prestige and brands are willing to pay premiums for them.

END-TO-END DIGITAL EMBELLISHMENT WORKFLOW

The DDC-810 can be integrated with Fiery® JobFlow™ workflow automation software to accomplish all the preparation steps in just one click! JobFlow makes job preparation more efficient through the creation of separate CMYK and spot UV files, page imposition, application of registration marks and barcodes, and submission of CMYK and spot UV files to a Fiery Driven™ printer and the DDC-810, respectively.

The Fiery integration also leverages existing Duplo barcode support for additional finishing on the Duplo Slitter/Cutter/Creasers. Save up to 70% of the finisher setup time by using a barcode produced by Fiery Impose software to automate the setup.

DDC-810 Raised Spot UV Coater

DDC-810 Workflow

1. Design your artwork in CMYK and the spot layer in Black and White.

2. Apply imposition and registration marks to both files or automate file preparation using EFI Fiery JobFlow. Send the imposed CMYK file to your digital press then load the printed sheets on the DDC-810 feed tray.

3. As each sheet is fed, the DDC-810 will read the registration marks and accurately apply the varnish.

4. Ready for finishing. Output is cured and dried for immediate handling.

DUPLO POLYMERS COMPATIBLE WITH DIGITAL PRESSES

Duplo offers formulated varnishes that are compatible with output produced by offset presses and digital presses from Canon, HP, Konica Minolta, Ricoh, and Xerox. Our varnish is delivered in 3-liter cartridges and it also performs on laminated stock.

VARIABLE IMAGE BARCODE KIT

Add variable capabilities for images and text with the Variable Image Barcode Kit. With this option, the DDC-810 has the ability to read 1D or 2D barcodes on each sheet and automatically load the pre-ripped spot layer file.

It also streamlines your operation with the ability to utilize hot folders, reducing the number of mouse clicks and touchpoints required.

APPLICATIONS

Produce high margin embellishments and value-added products in-house that your customers can touch and feel!

- Business cards
- Invitations
- Book covers
- Bookmarks
- Labels
- Brochures
- Custom packaging
- Direct mail pieces
- Greeting cards
- Magazine covers
- Posters
- And much more!

Imagine the possibilities.

Scan to watch the video

- Utilizes 600x600 inkjet technology, UV lamp curing and camera image registration
- Processes offset and digitally printed output up to 14.33" x 29.13" and 450 gsm
- Fast tracked delivery and installation so you can start running jobs within hours
- Easy to use and a compact footprint that fits into limited spaces
